## EPIDEMIOLOGY

Through education, research and practice, the Department of Epidemiology (EPI) aims to improve health and erase health inequities. We are a community of shared values: integrity because it is foundational, ambition because we believe that public health problems can be solved and we are the ones to do it, rigor because we challenge ourselves to do all our work at the highest level, and collegiality and inclusion because students, staff, and faculty are all committed to the same goals. Our educational programs ensure that students graduate with the knowledge, skills and philosophy to affect positive change in the public's health and with the professional skills to achieve career success.

---

*There is still a tremendous amount of work that needs to be done to protect and advance public health. Epidemiology—as a critical science of public health—contributes the research findings and descriptive data necessary to drive the public health mission forward. The Department of Epidemiology at the Rollins School of Public Health is committed to this mission. Our students, scientists, and staff engage in research and public health practice programs spanning the breadth of critical public health problems.*

**Timothy L. Lash, DSc, Professor and Chair**
